The Track-It Pressure/Temp and Vacuum/Temp Data Loggers are battery-powered, standalone watertight compact data loggers that record up to 64,000 samples. They can be configured to record both pressure and temperature or vacuum and temperature or either parameter alone to maximize data storage space. The unit is easily configured using the free downloadable Track-It™ DataLogger Software. Simply connect the included USB cable to the logger and an open USB port on your PC and the Track-It DataLogger Software automatically identifies the logger. Configure the unit to start or stop recording immediately, at a predetermined time and date, or only when an alarm condition is sensed. The sample storage rate can be set from 1 sample every 2 seconds up to 1 sample every 24 hours. The onboard data storage is non-volatile so data will not be lost in the event of a depleted battery.
